Tripwire IP360 Appliance Weaknesses	GFI LanGuard 12 Strengths
<p>Less functionality No patch management.</p>	<p>Patch management Microsoft, Linux, Apple OS X operating systems and third party applications including popular vendors like Adobe, Mozilla, Oracle, Apple, etc.</p>
<p>Pricing Enterprise level. Much more expensive compared to GFI LanGuard.</p>	<p>Low total cost of ownership Competitive price by centralizing vulnerability management, patch management and network and software audit.</p>
<p>Difficult to evaluate Hardware appliances are more difficult to evaluate and only scale in large steps.</p>	<p>Easy to install and get running Installed and running in minutes with almost no configuration. The user interface is purpose-built to assist users on what to do next.</p>

A Flexible Solution

GFI LanGuard combines both patch management and vulnerability management at a fixed price for Windows, Linux*, Mac OSX and mobile devices. For Windows based platforms GFI LanGuard supports both Microsoft and over 80 3rd party applications. A Web Based Central Management console offers easier management of different network sites, which could potentially also be installed in remote office locations. This makes GFI LanGuard the most flexible solution for organizations of any size from those with a hundred devices to larger ones with thousands of devices.

* (supported linux distributions are: RedHat Enterprise Linux 5+, CentOS 5+, Ubuntu 10.04+, Debian 6+, OpenSuse 11.2+, SUSE Linux Enterprise 11.2+ and Fedora 19+)

Conclusion

Tripwire IP360 is only focused on vulnerability assessment and does not facilitate security issues remediation. Its target is large enterprises and this is reflected in its higher pricing. GFI LanGuard facilitates remediation of security issues through patch management, unauthorized application uninstall, integration with remote desktop connections, etc., and sells at a highly competitive price.

GFI LanGuard is your own virtual security consultant: easy, always available and affordable!
